DARK WEB SCANNING

ACTIONABLE INTELLIGENCE ALLOWING YOU TO STAY ONE STEP AHEAD OF CRIMINALS.

RARELY A DAY GOES BY WITHOUT A DATA LEAK OR RANSOMWARE ATTACK BEING IN THE NEWS. TO PREVENT SUCH INCIDENTS, PLANNING AND PREPARATION ARE KEY FOR ANY BUSINESS.

Imagine finding out in advance that your organisation, your customers or your suppliers were in the sights of cyber criminals. And how, with that knowledge, you could take steps to neutralise the threat before it came to fruition.

Node4 has partnered with Dark Web specialists, Searchlight Cyber, to bring you the new Node4 Dark Web Scanner service, allowing you to do just that.

This solution helps you to understand your organisation's exposure on the dark web. Using clear web and dark web data sources, it provides actionable intelligence for enhanced cyber defence. It scans and analyses vast, complex and previously unobtainable data streams. It looks at the attributes specific to your organisation and provides you with actionable intelligence, allowing you to keep one step ahead of cyber criminals. It also includes a basic scan of external infrastructure, looking for any essential issues you may not be aware of.

And where support is required to address any technical vulnerabilities identified, you can rely on Node4 being there to help, with our security team on hand to deal with any problems.

Importantly, unlike others operating in this space, Searchlight Cyber does not pay criminals for stolen credentials found on the dark web which would assist their analysis of a potential attack. To be able to provide this service without funding criminals or adopting similar tactics is an important moral standpoint, in this necessary shift in modern day cyber combat.

Proactively protect your infrastructure, people and digital assets across your organisation with relevant, actionable dark web intelligence.

KEY BENEFITS

PREVENT DATA BREACHES
Identify early warning signs of attack through continuous monitoring of indicators of malicious activity such as leaked credentials, IP addresses, open ports, compromised devices and dark web traffic.

STOP EXECUTIVE THREATS
Actively monitor for executive and VIP credentials that have been leaked on the dark web to protect your staff and the company.

PROVE COMPLIANCE
Understand your exposure on the dark web, so that your organisation can do everything it can to protect employees against cybercrime and fraud, with the ability to audit your external threat profile and prove compliance.

THREAT INTELLIGENCE
Enhance your threat intelligence and threat monitoring capabilities with an unmatched window into activity on dark web forums, marketplaces and conversations, without any risk to your analysts.

INCIDENT RESPONSE
Forensically examine the chain of events in the dark web that led to an attack, to inform incident mitigation and response.

SUPPLY CHAIN MANAGEMENT
Remotely monitor the exposure of your third-party suppliers and partners on the dark web without the need for an agent on their systems, to prevent supply chain attacks and prove compliance.

Be informed, prepared and equipped to handle the very real threats to your organisation from the dark web.
