

PATHFINDER: SECURITY ASSURANCE ASSESSMENT

ENSURING THE SECURITY OF YOUR IT ESTATE IS AT THE HEART OF YOUR DIGITAL TRANSFORMATION GOALS.

NODE4'S PATHFINDER SERVICE OFFERS A HIGH-LEVEL REVIEW OF YOUR IT INFRASTRUCTURE AND SECURITY POLICIES, WITH THE AIM OF ASSESSING AND IDENTIFYING YOUR CURRENT RISK PROFILE.

LEVERAGE NODE4 SPECIALISTS TO EFFECTIVELY IDENTIFY AND PRIORITISE SECURITY RISKS UNIQUE TO YOUR ORGANISATION, ALONGSIDE A GAP ANALYSIS OF YOUR MICROSOFT 365 LICENSE ESTATE AND ASSOCIATED FEATURESETS.

Given the rise of cybersecurity attacks, organisations are becoming increasingly reflective of their own risk exposure and the potential impact a breach could have on their operations.

However, understanding the intricacies of their environment and the vulnerabilities posed by legacy IT services, user interactions, supplier integrations and web applications is becoming increasingly challenging.

To assist in addressing these concerns, Node4 is positioning the concept of a **Security Assurance Assessment**, via our Pathfinder offering.

This service has been designed to combine the capabilities of Node4's Modern Work and Security practices to engage in a high-level review of an organisation's IT operations.

KEY BENEFITS

-  **ACCESS TO SPECIALIST RESOURCE**
Engage with Node4 Transformation Specialists, with a range of VCISO and Microsoft services experience.
-  **BESPOKE WORKSHOPS**
Engage in tailored sessions to review your existing IT infrastructure and associated security policies.
-  **PRIORITY-BASED RISK ANALYSIS**
Receive a bespoke report outlining the identified risks within your IT environment (ranked by severity with suggested remediation actions).
-  **MICROSOFT 365 LICENCE REVIEW**
Assessment of your existing M365 license model, with associated gap analysis based on your specific business goals.

The key areas of focus will be to understand the IT infrastructure currently in place, how staff are accessing and using corporate systems, how their customers interface with their IT environment and the security policies and controls that underpin these elements.

Through adopting this approach, Node4 can assist organisations in ensuring that their existing security posture is fit for purpose, identifying any potential gaps in service or potential risks, which will be ranked on a priority basis.

PATHFINDER: SECURITY ASSURANCE ASSESSMENT

ENSURING THE SECURITY OF
YOUR IT ESTATE IS AT THE
HEART OF YOUR DIGITAL
TRANSFORMATION GOALS.

BESPOKE ENGAGEMENT

Node4 will schedule workshops that can be carried out remotely or in person to gain a full picture and view of your organisation's specific IT infrastructure and associated security policy requirements.

Through providing deep analytics and actionable insights in these areas, Node4 can help your organisation optimise licensing costs, improve productivity, secure identities, and pave the way for smart, effective digital transformation.

MICROSOFT 365 LICENSE REVIEW

Full Microsoft 365 license review, assessing the features that are both currently active and available as part of the licensing model in place.

ACCOUNTABILITY

Ensure your organisation's security posture meets the requirements outlined by your existing security policies and processes, providing your organisation with peace of mind.

These features will be cross referenced with any other tooling being used by your organisation, to see where cost efficiencies and technical improvements can be made.

KNOWN UNKNOWNNS

The engagement provides your organisation with an opportunity to address those areas of concern that remain within your existing IT estate. Furthermore, it may also identify considerations you are not currently aware of.

Based on your organisational goals, this gap analysis will be used to suggest recommendations moving forward.

KEY LICENCE INSIGHTS

Leverage Node4's Cloud Optimisation Platform (COP), which enables Node4 to provide insights on areas such as:

ACTIONABLE REPORT

As part of the workshop engagement, Node4 will provide a bespoke report outlining any risks that have been identified, ranked on a priority basis by severity. This alongside an overview of your current IT estate can then be used to underpin ongoing transformation projects and goals.

- Joiners/Movers/Leavers (JML)
- Finance Optimisation
- M365 Product Adoption and Consumption
- AD Account Distribution
- Cloud Application Usage
