

DATA ARCHITECTURE ASSESSMENT

NODE4'S DATA ARCHITECTURE ASSESSEMENT SERVICES PROVIDE TECHNOLOGY EXPERTISE AND ADVISORY SUPPORT FOR DATA, ANALYTICS AND REPORTING STRATEGIES

Node4's Data Architecture Assessment is designed to help businesses improve data warehousing and analytics architecture, increasing user adoption, and ultimately derive more value from data. Our assessment service helps clients review existing data architecture, identify areas of improvement, and provide recommendations based on industry best practices.

Our team of Data experts will work with you to understand the current data architecture, the challenges and goals, and provide a comprehensive report that outlines our findings and recommendations.

The duration of the Data Architecture Assessment is typically 5-10 days, depending on the complexity and maturity of the environment, and encompasses:

 **Data Architecture Review:** An analysis of data sources, data models, data flows, data quality, and data governance.

 **Future Architecture:** Based on our findings, we'll propose an optimal Azure architecture that future proofs your data objectives.

 **Report and Presentation:** We'll present our recommended strategy and approach focussing on:

- I. Current toolsets and development processes
- II. Current 'as-is' architecture maturity assessment
- III. Identify potential use case for future architecture
- IV. Future data strategy
- V. Recommended best practice data architecture
- VI. Azure data warehouse appraisal
