Product Overview

VDC Slide

A frictionless Cloud Migration Service to migrate VMware workloads into Virtual Data Centre

VDC is Node4's market leading VMware IaaS platform, offering no-contract, pay as you go infrastructure. VDC is proving highly attractive as it offers a compatible VMware infrastructure for existing workloads, with a familiar interface for self-service management for IT admins.

Many organisations are leveraging VDC for maintaining VM workloads, to save the business having to commit to refreshing aging hardware and signing up to long term, costly software agreements that can restrict future agility.

Designed to deliver a powerful migration methodology for VMware workloads, Slide offers a low risk, easy to execute offering with minimal downtime. Utilising live replication technology, Slide allows clients to have near zero downtime and the ability to execute test migrations to ensure peace of mind prior to a cut over.

VDC Slide offers the ability for clients to self-manage their migration, by simply deploying a replication appliance in their estate or the Node4 Cloud Migration team can assist. The migration team are experts at building the VDC Landing Zones and an industrialised "Migration Factory" of processes to perform specific tasks to move servers, services or data. With end-to-end project management the team will ensure pre-flight migration checks, scheduling and coordination with status monitoring and live service transition.

VDC Slide is a comprehensive offer using the latest migration tools combined with an experienced, specialist team of cloud engineers that have delivered 100's of cloud migration projects.

Key benefits to VDC Slide

Native Migration Tool
VDC Slide uses VMWare migration technology to live replicate workloads into the VDC Landing Zone(s). This ensures that the migration tooling is 100% compatible with your VMware environment.

Low Risk Migration
The live replication technology allows you to undertake non-disruptive test migrations to ensure operability prior to the final cut over.

Scalable and experienced Cloud Migration Team
We have an experienced team of Cloud migration experts on hand. As a team, they have have delivered 100's of projects and have vast experience of successful engagements.

Rapid Deployment
VDC Slide provides a quick to deploy migration appliance that can start replicating workloads in hours. Our Migration Factory uses repeatable and proven processes to accelerate migration flows.

End-to-end Management
We have in-house Project management teams available to support the migration lifecycle who will ensure governance, reporting and coordination of activities during the migration phase.

Secure Operating Model
Node4 are ISO27001, ISO27017 & ISO27018 accredited and employ Security Cleared engineers to carry out migration projects like these.
