NODE4

Data Support Services

Optimising Your Reporting & Analytics Environments

Our Data Analytics Support Service is designed to optimise your reporting and analytics environments, helping to alleviate pressure on your internal technical teams and enable you to focus on business critical activities.

We can deliver this as a focussed service specific to your reporting and analytics environments, or with our associated DBA and Data Platform Support Service to deliver full data stack management.

Maintaining Your Data Environment

The Node4 Data team has deep expertise in Data Analytics, providing quick and effect support when a system requires remediation. Following a thorough on-boarding process, our service model delivers support within a tightly defined SLA, ensuring your critical business reports remain constantly optimised.

Our Reporting and Analytics support is designed to resolve incidents relating to the following typical tasks:

- Data pipeline issues
- Refresh process review and recommendations
- Checks to source DB connections
- Checks to data gateway
- ETL process failure
- Dataset refresh approach
- Data modelling, within the recorded architecture
- Minor report modifications

Supported Environments

We are experts at supporting the Microsoft Data stack including Fabric and Power BI Reporting and Analytics environments.

Key features

- Environment On-Boarding including report and optimisation recommendations
- SLA bound Incident and Event Management
- Event and incident management
- Request fulfilment
- Backup and recovery advice and support
- Licence advice

Node4 Capabilities

Node4 is a managed services specialist working in partnership with mid-market and public sector clients to offer a comprehensive suite of services ranging from Connectivity, Infrastructure, Data and AI, Modern Work, Security and Application Innovation. Node4 deliver Consulting services for best practice implementations through to 24*7 Managed Services for ongoing operational support and system optimisation. This combination of services enables our clients to derive maximum long-term value from their technology investments.

As a leading Microsoft Partner, our credentials include being an Expert MSP, being part of Microsoft's Inner Circle and being an accredited Solutions Partner for all key technology areas.
