

M365 TENANT TO TENANT MIGRATION

MOVING YOUR MICROSOFT 365 DATA TO A NEW
TENANT WITH MINIMAL DISRUPTION AND DOWNTIME

M365 Tenant to Tenant Migration is a service offering from Node4 that provides a comprehensive approach to ensure you move your Microsoft 365 data to a new tenant with minimal disruption and downtime. Whether you are going through a merger, acquisition, divestiture, or rebranding, Node4 can help you migrate your email, SharePoint, OneDrive, and Teams data to a new Microsoft 365 tenant, while preserving the security, permissions, and metadata of your data.

Node4 will work with you to design and configure your new Microsoft 365 environment, ensuring that the solution is secure, and data is readily available for all your team. We will also provide training and support for your staff and IT team on how to use and manage the new Microsoft 365 environment.

Node4 will use BitTitan MigrationWiz, the industry-leading migration tool, to ensure a smooth and successful migration of your data, with minimal disruption and downtime. We will also provide a comprehensive solution configuration document and test plan to ensure quality and accuracy.

Key Features:

- ❖ Secure and efficient migration of existing email, SharePoint, OneDrive, and Teams data to a new Microsoft 365 tenant
- ❖ Automated tooling ensures efficient and accurate data migrations, reducing manual effort and the risk of errors.
- ❖ Minimise business disruption by seamlessly migrating data without extended downtime. Schedule migrations during off-peak hours to avoid impacting productivity.
- ❖ Training and support for your staff and IT team on how to use and manage the new cloud environment
- ❖ Fully managed project from a Microsoft certified, UK based team delivering class leading technical excellence

Requirements Gathering Workshop

Node4 will conduct a workshop with you to review your current email environment, and to agree on how your data will be migrated.

Configuration Document and Test Plan

Node4 will document the solution configuration and the test plan, detailing what is being delivered and how. The document will include the source and target locations, the migration tools, the migration schedule, and the testing criteria.

Migration of Data

Node4 will migrate your email, SharePoint, OneDrive, and Teams data from the source tenant to the destination tenant, using BitTitan MigrationWiz. We will migrate:

- One domain
- One mailbox per user
- Up to 10 SharePoint document libraries
- Up to 20 source locations
- Up to 5TB of file data
- Up to 100 mailboxes.

Training and Handover

Node4 will train your admin and IT staff on how to administer the permissions and settings of your SharePoint, Teams, and OneDrive environment. We will also hand over the environment to your operations team, with detailed documentation and guidelines for maintenance.

FURTHER BENEFITS OF NODE4

- **Managed Services:** Node4 can provide ongoing support and management of your Microsoft 365 environment, ensuring that it is always up to date, secure, and compliant.
- **Cloud Backup:** Node4 can provide cloud backup for your Microsoft 365 data, ensuring that you can restore your data in case of accidental deletion, malicious attacks, or retention policy gaps.
- **Security Services:** Node4 can provide security services to protect your Microsoft 365 data from cyberthreats, such as ransomware, phishing, and data breaches.
- **Collaboration Services:** Node4 can provide collaboration services to enhance your Microsoft 365 experience, such as voice and video conferencing, chat and instant messaging, and document sharing and co-authoring.
