Node4's **Data Doctor** session is a workshop designed to help organisations identify, prioritise and accelerate key business outcomes associated with their organisational strategy through data.

Data is at the heart of everything a business does. Whether that be creating reports, complex analytics, machine learning or having a single version of the truth, it is critical data is considered. It is especially important to ensure any data improvement activities align with organisational strategy.

Our approach identifies key themes from your organisational strategy and aligns them to the Object and Key Results (OKR) model. We'll establish Key Performance Indicators (KPI's) to manage success, and ensure any recommendations align to real-world business outcomes.

The outcome of this engagement includes a PowerPoint deck that includes all findings alongside a data roadmap. This roadmap considers short term activities, which you are able to act on immediately, with longer-term recommendations. The longer-term recommendations are supported by Node4 services to ensure your outcomes are achieved with industry best-practice and the right technology.

Key benefits

- **Clearly Defined Objectives** which align to your organisational strategy.
- **Established KPIs** to monitor success across each stage of your adoption roadmap.
- **Human-centric** discovery, promoting adoption from the ground up and supporting sustainable change.
- **Expert guidance** from Microsoft certified professional.

People, Process and Technology need to come together in harmony. By taking a business-led approach, Node4 is here to make sure your organisational goals are achieved. We ensure everything we do takes a human-centric approach and people are kept at the heart of innovation. Technology can be recommended based on our findings, ensuring adoption happens from the ground up and more importantly is sustainable.
